

FRANKLIN MIDDLE SCHOOL - 1930 - 10 Cockeys Mills Road, Reisterstown. This structure was the third home of Franklin High School, which had begun in the Franklin Academy building (now the branch library). The long building facing Reisterstown Road was designed by Smith and May of Baltimore and was completed in 1930, a three-story structure with two upper levels of brick, set on a full basement level of white rubble stone. The entrance is located in the center of a classical facade flanked by recessed columns, topped by a parapet. The windows are placed in clusters of two and four. These same grounds contained an earlier high school, built in two phases, first in 1904, and expanded in 1914 by a hip-roofed, heavily bracketed block. The old buildings were made the elementary school and survived until 1965 when a west wing was added to the 1930 structure, by then converted to a Junior High School. The structure is now classified as a middle school.
